## DWA\_08 Discussion Questions

In this module you will continue with your "Book Connect" codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

- 1. What parts of encapsulating your logic were easy?
  - There wasn't much to change besides creating a function and then calling it back.
  - The encapsulated code retains the same functionality as the original code, ensuring that the book preview is displayed correctly when an item is clicked.
- 2. What parts of encapsulating your logic were hard?
  - Encapsulating the book preview functionality was not particularly challenging, but I can see it would be challenging on a larger scale.
- \_\_\_\_\_
- 3. Is abstracting the book preview a good or bad idea? Why?
  - Abstracting the book preview functionality into a separate function is generally considered a good idea.

•	It promotes modular code design by breaking down complex logic into smaller, manageable units. It allows you to isolate specific functionality, making it easier
	to understand, test, and maintain.
